SAFETY RANKING SLOVENIA'S ROAD NETWORK

THE PROBLEM

AMZS (Slovenian motoring club) supported by Republika Slovenia Ministrstvo za Infrastrukturo in Prostor, the Slovenian Police service, DARS Povezujemo Slovenijo and Prometnotehniski Institut were committed to improving the safety of Slovenia's road network.

THE SOLUTION

A large scale project was rolled out which involved risk mapping Slovenia's roads, carrying out video-based road surveys, star rating the safety of the network to assess the potential for the likelihood and severity of crashes, producing a Safer Roads Investment Plan to allocate resources on countermeasures and "performance tracking" to assess changes in the performance of the roads over time.

THE OUTCOME

The work has institutionalized the EuroRAP-iRAP methodology within the government and is recognized as a response and compliant with the road infrastructure safety management Directive 2008/96/EC of the European Parliament.
